

CLAIMS

1. A connection piece for a fuel pump having a receiving device in which a plug is arranged which has electrical contacts for connecting an electric motor of the fuel pump to a mains supply, the plug being extrusion-coated with plastic, characterized in that the plug (7) has an integrally formed, circumferential sealing lip (17).
2. The connection piece as claimed in claim 1, characterized in that the sealing lip (17) is arranged on the plug (7) in the region of a bushing (14) of the electrical contacts (6).
3. The connection piece as claimed in claim 1 or 2, characterized in that the sealing lip (17) has a region (18) which points in the direction of the electrical contacts (6).
4. The connection piece as claimed in claim 1 or 2, characterized in that the sealing lip (17) can be elastically deformed.
